

World
Plumbing
Day **Mar.11**

WORLDPLUMBING.ORG

**SPREAD
THE WORD**

This World Plumbing Day spread the word about the importance of plumbing and plumbers to protect public health and improve amenity.

There are many new plumbing inventions that both help the environment and help save you money.

Solar Hot Water

Install panels on your roof, reducing your carbon footprint by 30 percent and you are likely to save lots of money on energy bills each year

Motion Sensor Fittings

Install motion sensor fittings so whenever the tap is not in use it turns off automatically. Many work places and public bathrooms are installing motion sensor fittings to reduce water waste and improve hygiene

Low-flow Shower Heads

Switching from an average 9L per min shower head to a 7.5L per min can save more than 500L of water per year. If every household in the world changed, the water saving would be enormous.

PLUMBING FACT

**ONLY 4 OUT OF 10 PEOPLE IN THE WORLD
HAVE TOILETS IN THEIR HOMES**
